EXECUTIVE SUMMARY

Computer Science and Engineering (Artificial Intelligence) graduate with hands-on experience building and shipping production-grade full stack applications and AI/ML systems. Developed live MERN-stack products handling real users and operational data and built a computer vision pipeline at scale during an industry internship. Comfortable across the full development lifecycle — from system design and API development to deployment, debugging, and client-side delivery.

WORK EXPERIENCE

Full Stack Developer Intern | Synergeek Technologies

Feb 2026 – Jul 2026 (*Remote*)

- Designed and shipped a **production MERN stack POS system** serving 2 live food courts with ~50 kitchens, handling concurrent multi-terminal order management, billing, and inventory tracking.
- Built scalable React.js frontends and Node.js/Express.js REST APIs; reduced manual billing errors by ~40% through automated order flow and real-time MongoDB data sync.
- Owned the full development cycle — architecture, implementation, deployment, and post-launch bug fixes — for a live customer-facing product.

Full Stack Developer (Freelance) | Essaar Builders

Dec 2025 – Apr 2026 (*Coimbatore*)

- Sole engineer on a **modular ERP system** covering Work Orders, BOQ, Attendance, and Subcontractor management using MERN stack, Tailwind CSS, and Redux.
- Integrated Nivo Charts for real-time data visualization, improving operational tracking efficiency by ~60%; deployed on Render (cloud) and client's local device, eliminating all manual workflows.
- Managed the complete product lifecycle from requirements gathering with the client through to deployment and ongoing support.

Computer Vision Intern | TVS Motor Company

May 2024 – Jun 2024 (*Hosur*)

- Built an automated vehicle parts annotation pipeline in Python and OpenCV, processing conveyor belt footage at **30 FPS** and replacing a fully manual labelling process.
- Achieved over **95% annotation accuracy** through systematic QA against ground-truth datasets and iterative correction workflows.
- Optimised pipeline for real-time throughput, enabling live monitoring on the production line with no manual intervention.

SKILLS

Languages: Python, JavaScript, SQL, HTML, CSS

Frameworks & Libraries: React.js, Node.js, Express.js, Redux, Tailwind CSS, NumPy, Pandas, Scikit-learn, TensorFlow, Keras, PyTorch, OpenCV

Tools & Technologies: Git, GitHub, REST APIs, Postman, VS Code, Jupyter Notebook, Render

Databases: MongoDB, MySQL

PROJECTS

Point of Sale (POS) System — app.eateszy.com

- Live production POS system for food courts — multi-terminal order management, billing, and inventory tracking with responsive React UI and RESTful APIs; serving 2 food courts with ~50 kitchens.

ERP System for Construction Management — erp-for-essar-builders.onrender.com

- End-to-end modular ERP with real-time dashboards for Work Orders, BOQ, Attendance, and Subcontractor management; deployed live at a construction firm using MERN stack with Redux and Nivo Charts.

MindEcho: AI-Powered Voice Biomarker Framework

- Mental health detection system combining MLP, CNN, and Logistic Regression to analyze voice, text, and emotion signals — achieving **97.2% accuracy** in identifying depression and suicide risk, with a real-time web interface.

EDUCATION

Karunya Institute of Technology and Science

May 2026

B.Tech — Computer Science and Engineering (Artificial Intelligence) · Coimbatore

CERTIFICATIONS

AWS Academy Cloud Architecting (60 hrs)

Sep 2025

MongoDB Python Developer Path

Feb 2024

Build Your Own Chatbot — IBM Cognitive Class

Oct 2025

Data Analytics Essentials — Cisco Networking Academy

Oct 2024

Cyber Security and Privacy — NPTEL, IIT Madras

Oct 2023
